

Formed Metal Bellows Seals

DS-95N

Applications

- For use with extremely corrosive chemicals, chemical, and refinery processing pump applications.
- For process services requiring corrosion resistance.
- Very good self cleaning effect.
- Suitable for low-end sterile applications.

The DS-95N seal is the ideal for general purpose applications. Its Alloy 20, Hastelloy C, Titanium, AM 350 bellows provide corrosion resistance in a board rang of services. Its cost-effective design, combined with a reliable performance.

Standard Materials

- Metal Bellows : Alloy 20, Hastelloy C, Titanium, AM 350
- Adaptive Hardware: Alloy 20, Hastelloy C, Titanium, SUS 316
- Rotary Face : Silicon Carbide/ Tungsten Carbide/Carbon
- Stationary Face : Silicon Carbide/ Tungsten Carbide/Carbon
- Secondary Seals : Fluoroelastomer/ Per-Fluoroelastomer/Chemraz

*(Other configuration of materials also available on request)

Operating Conditions

- Max. Operating Pressure : 20 kg/cm² *
- Temperature Range : -40 to 220 °C *
- Max. Rubbing Speed : 20 m/s

*(Depend on combination of materials)

Design Features/Benefits

- Results in even stress distribution with benefits of greater strength and higher rate of flexibility: seal is bi-rotational and inherently pressure balanced.
- Is resistance to clogging and therefore ideal for slurries and fibrous liquids. Similarly, seal unit is easy to clean and sterilize in place.
- Ensures a simple-to-fit seal, with superior heat dissipation paths, Seal unit is reliable and does not wear the shaft.
